

A PRODUCT MANAGEMENT CASE STUDY

Designing DPDP-Compliant, Frictionless Privacy for Swiggy

Balancing India's Digital Personal Data Protection Act, 2023 with a frictionless consumer experience

Three Forces Are Colliding

**Users don't know
what data is collected**

Location, payments, order history —
collected silently

**DPDP requires
explicit, informed consent**

Bundled T&Cs no longer meet the legal bar

**Swiggy must balance
trust with speed**

Every extra tap risks losing a hungry user

Meet Rina — Privacy-Apathetic, Not Privacy-Absent

Rina, 27

Marketing Executive, Bengaluru

“Just let me order — I don’t have time to read this.”

Orders 4x/week • Dinner + Instamart

JOB TO BE DONE

When I'm hungry and short on time, I want to order food with minimum taps — without wondering how much of my life I just handed over.

Forced “always allow” location, purpose unclear

Phone number visibly shared with delivery partner

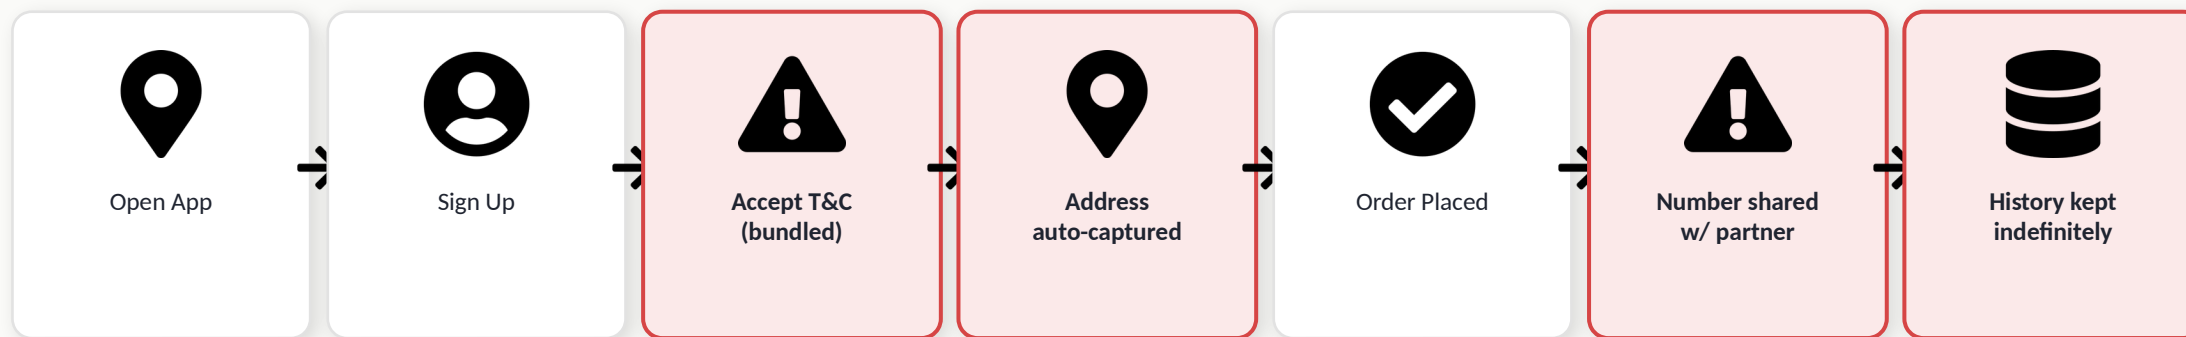

No easy way to delete old order history

Marketing consent bundled into account creation

Today's Journey Breaks DPDP at Four Points

● Red = friction / DPDP gap

DPDP REQUIREMENT

- Specific, itemized consent
- Easy withdrawal
- Data minimization
- Right to erasure

TODAY'S GAP

- ! Single bundled accept
- ! No in-app consent dashboard
- ! Address history kept indefinitely
- ! No self-serve delete

Progressive Consent, Not a Consent Wall

BEFORE

One bundled “Accept” at signup.
Everything collected upfront.
No way to change your mind easily.

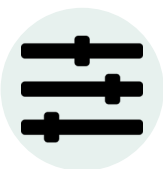

AFTER

Ask only what's needed, when it's needed.
Plain-language, one-line purpose.
One dashboard to manage it all, anytime.

employees only

5% Beta

2 metros,
2 weeks

25% Rollout

Guardrails
monitored daily

100% Launch

Full rollout +
support briefed

A/B TEST: UX & copy only

Wording, layout, toggle order — every variant still meets DPDP's clear-consent bar.

NEVER test: whether to comply

Withholding proper consent from a control group to measure “friction impact” is a legal breach, not a growth test.

Conscious Trade-offs, Not Blind Spots

ENGINEERING

Risk: Legacy pipelines slow to retrofit

Fix: Phase by data category

BUSINESS

Risk: Personalized ad revenue may dip

Fix: Invest in contextual ads

LEGAL

Risk: DPDP Rules still being phased in

Fix: Build a configurable framework

UX

Risk: More controls = more perceived complexity

Fix: Progressive disclosure

PRIVACY

Risk: "Anonymized" data can be re-identified

Fix: Apply k-anonymity thresholds

EDGE CASES

Risk: Shared family accounts, call-center orders

Fix: Parental flag + assisted consent script

*“Privacy should become a competitive advantage —
not a compliance burden.”*
